

AHAFO GOLDMINE

AHAFO GOLDMINE 161KV HIGH VOLTAGE
POWERLINE

Mining

Located approximately 30 kilometers north of Newmont's existing Ahafo South operations, the Ahafo North Project will comprise a series of open pits and a process plant including crushing, milling, a carbon in leach (CIL) and elution and gold recovery circuits.

Ahafo North gold mine is a greenfield development with no current or prior mining activity on the site and will be producing approximately 275,000 to 325,000 gold ounces. This project creates approximately 1,800 jobs at the peak of construction with more than 550 permanent roles created once the mine is operational.

Alongside Newmont, we want to create lasting value for host communities through local sourcing and hiring. Newmont Ghana Gold Limited is bringing Ahafo North Project into the execution phase and CSI Energy Group's experience and expertise will enable the design, supply, transport, installation, testing and commissioning of an approximately 18.5 km of double circuit 161 kV High Voltage Powerline.

PROJECT SUMMARY

Client:
NEWMONT GHANA GOLD
LIMITED

Engineer:
LYCOPODIUM GHANA LTD

Sub Contractor:
CSI ENERGY CONTRACTING

Contract Value:
USD 5.9 MILLION

Duration:
COMPLETION EXPECTED
FEBRUARY 2024
